GROUP

Mumbai/ BKC

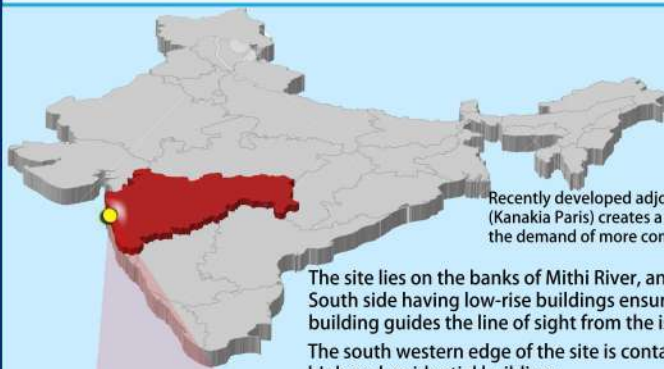

The site is located near BKC which is a business district center located in the heart of Mumbai, which is predominantly commercial buildings. The design derives its cues from the sophisticated urban fabric of the region. This idea is reflected in the dimensioning of the proposed building that aims to seemly blend in with the urban landscape yet stand out with grand splendor.

Proposed Commercial Building at BKC for Transindia Group

Urban Analysis

Location/ Movement/ Visual corridors/ Site Potential

Recently developed adjoining high-end Residential buildings (Kanakia Paris) creates a business agglomeration owing to the demand of more commercial spaces.

The site lies on the banks of Mithi River, and the NE, East and South side having low-rise buildings ensures that the ensemble building guides the line of sight from the island city. The south western edge of the site is contained by the SRA and high end residential buildings.

The sant Dyaneswar road on the south east divides the site from the neighboring residential zone, predominantly comprising of low-rise middle income group residential buildings.

Abutting Bharat Nagar Road and Shree Hari Mandir Road connects the site to surrounding area and help to create smooth vehicular movement for proposed building.

Bandra Kurla Complex Road

Mumbai University Campus View

The location of the proposed site/building is quite strategic, being framed by the international airport, Mumbai University, and BKC's MMRDA grounds.

International airport 5 km away from site Mumbai University

BKC, BKC Grounds

Context of the surroundings creates a point of convergence towards the building from the airport and BKC, drawing the building as a local focal point.

The wind patterns diagram characterizes the direction from which the wind enters the site and the percentage of hours per year that the wind is coming from a particular direction. The length of each arrow indicates the percentage of hours per year that wind blows from each direction. This diagram describes orientation opportunities that exist, along with locations where natural ventilation may be incorporated into the design, and the availability of user-accessible comfort strategies.

The sun path diagram characterizes the movement of the sun through the sky in summer and winter. The orange arc indicates the widest extent of sunrise and sunset in summer. The blue arc indicates the minimum extent of sunrise and sunset in winter.

North/South Monsoon in Mumbai

Climatic conditions of Mumbai and site location influence the design process.

As per environmental Mapping and site conditions it is advisable to have glass facade of the building on Northern side.

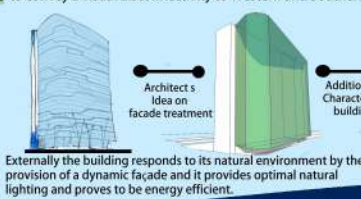

Sun path tracing helps in zoning of build form and green spaces mapping, northern side of the site green spaces/ entrance and drop off lobbies and solid structures on western side of the site which helps creating apt ambience in layout.

Design process:

The 'P' shaped site is situated on the Western side of the Mithi River bank, abutting two roads.

Environmental/ Site Analysis

Environmental/ Site Mapping

contextualising the site and given brief by the client, the program divides the site into major two design components: residential and commercial.

DIAGRAMATIC EVOLUTION

Proposed Commercial Building at BKC for Transindia Group

Design Analysis

Envision of form

Design/form of the building is inspired by the characteristics of the river and physiognomies of ships. While sailing Sail of a ship get its shape by the wind direction and creates interesting volume in inner side of convex, similarly, the glass facade placed on the Eastern Northern side of the building inspired by the shape of the sail of a ship helps by providing a variety of themed social, professional and digital collaboration spaces at different scales and sizes throughout the building it also offers apt light and the view beyond from North to South Side.

Perspective View

The design aims to establish a business district character in the site, through conscious efforts of blending in the vision of BKC. It provides an icon for the city that empowers with form and volume also changes the surrounding urban landscape.
